# **CSA:3712 SOFTWARE TESTING**

## **CO:1-Assessment tool:3-MCQ test**

**B S Reshma**

**192521342**

1 A team applies systematic test design techniques during

development. This reflects: a) Debugging b) Testing as an engineering activity c) Maintenance d) Deployment

2 If a project skips defined testing processes, what is the likely

outcome? a) Faster delivery with high quality b) Increased defects in production c) Reduced testing cost only d)

Improved documentation

3 Selecting test cases based on requirements demonstrates:

a) Random testing b) Process-driven testing c) Ad hoc testing d) Maintenance testing

4 Applying equivalence partitioning is an example of: a) Debugging b) Test design technique c) Coding standard d) Deployment activity

5 A tester identifies missing requirements during testing. This

shows: a) Coding error b) Process gap c) User error d) Hardware issue

6 Following a structured testing lifecycle ensures: a)  
Random defect detection b) Improved software quality  
c) Less documentation d) No defects

7 Which activity best represents testing as a process? a)  
Writing code b) Executing test cases systematically c)  
Deploying software d) User training

8 A tester reuses test cases from a repository. This  
supports:

a) Efficiency in testing b) Increased coding errors c)  
Reduced coverage d) Random testing

9 If defects are tracked and analyzed, it improves: a)  
Coding  
speed b) Software quality process c) Deployment time  
d) User interface

10 Applying boundary value analysis helps to: a)  
Increase documentation b) Detect edge-case defects c)  
Reduce  
execution time d) Avoid testing

11 A tester validates system behavior against  
requirements.

This is: a) Verification b) Validation c) Debugging d) Coding

12 Detecting defects before release reduces:

a) Development effort b) Maintenance cost c) Coding standards d) Testing scope

13 Applying testing principles ensures: a) Zero defects guarantee b) Early defect detection c) No testing needed d) Faster coding

14 Which principle suggests testing all inputs is impossible? a) Exhaustive testing b) Exhaustive testing is impossible c) Early testing d) Defect clustering

15 A tester focuses on frequently failing modules. This uses: a) Random testing b) Defect clustering principle c) Regression

testing d) Smoke testing

16 If testing starts early in SDLC, it helps: a) Reduce defects cost b) Increase coding errors c) Delay project d) Skip

documentation

17 A tester designs test cases independently from developers.

This ensures: a) Bias b) Objectivity c) Delay d) Redundancy

18 A tester reviews requirements for errors. Role performed is:

a) Developer b) Tester c) Manager d) User

19 Reporting defects clearly is part of: a) Coding b) Tester's responsibility c) Deployment d) Maintenance

20 A tester collaborates with developers to fix bugs. This shows: a) Isolation b) Teamwork c) Delay d) Redundancy

21 A requirement ambiguity causes defects. Origin is: a) Coding

b) Requirements phase c) Testing phase d) Deployment

22 Incorrect algorithm implementation leads to: a) Requirement defect b) Design defect c) Coding defect d) Testing defect

23 Missing validation checks are example of: a) Design defects

b) Coding defects c) Requirement defects d) Deployment defects

24 Poor UI design causing confusion is: a) Coding defect b)

Design defect c) Requirement defect d) Hardware defect

25 A system crash due to memory leak is: a) Requirement defect b) Coding defect c) Design defect d) Documentation defect

26 Classifying defects based on severity helps: a) Ignore defects b) Prioritize fixing c) Delay release d) Increase cost

27 A critical defect impacts: a) Minor feature b) Core functionality c) UI color d) Documentation

28 A minor defect example is: a) System crash b) Login failure c) Typo error d) Data loss

29 Defect classification helps testers to: a) Ignore bugs b) Organize defects c) Skip testing d) Increase errors

30 A defect repository is used to: a) Store code b) Store test cases c) Store defect details d) Store UI designs

31 Reusing defect data helps in: a) Predicting issues b) Increasing bugs c) Reducing tests d) Skipping phases

32 A defect repository improves: a) Code complexity b) Testing efficiency c) User interface d) Deployment speed

33 Logging defects with details ensures: a) Confusion b) Traceability c) Delay d) Redundancy

34 A tester uses past defect data to design tests. This is:  
a) Random testing b) Experience-based testing c)  
Debugging d) Deployment

35 Incorrect login validation is an example of: a)  
Functional  
defect b) Performance defect c) Security defect d) UI  
defect

36 Slow response time is a: a) Functional defect b)  
Performance defect c) UI defect d) Coding standard

37 Unauthorized data access indicates: a) UI defect b)  
Security defect c) Functional defect d) Design defect

38 Missing button functionality is: a) Functional defect  
b) Security defect c) Performance defect d) Hardware  
defect

39 Poor alignment in UI is: a) Functional defect b) UI  
defect c) Security defect d) Design defect

40 Applying testing principles avoids: a) Coding b)  
Redundant  
tests c) Deployment d) Maintenance

41 A tester validates outputs using expected results.  
This is: a) Debugging b) Test execution c) Coding d)  
Maintenance

42 If defects are not tracked, it leads to: a) Better quality b) Poor traceability c) Faster delivery d) No impact

43 Applying test process ensures: a) Random results b) Structured testing c) No defects d) No planning

44 Test case design based on requirements ensures: a) Low coverage b) High coverage c) No defects d) Less effort

45 Early testing reduces: a) Defect cost b) Code size c) UI design d) Deployment time

46 A tester identifies repeated defects. This indicates: a) Good design b) Poor process c) No issue d) Perfect testing

47 Reviewing test results helps: a) Ignore defects b) Improve quality c) Skip testing d) Reduce effort

48 A tester applies regression testing to: a) Add features b) Ensure fixes work c) Deploy software d) Design UI

49 Identifying root cause of defects helps: a) Increase bugs b) Prevent recurrence c) Delay testing d) Skip coding

50 A test plan ensures: a) Random execution b) Organized testing c) No testing d) No defects

51 Applying defect classification improves: a) Testing cost b) Fix prioritization c) Coding errors d) UI design

52 A tester uses historical defect trends. This helps in: a) Ignoring defects b) Risk-based testing c) Deployment d) Coding

53 Testing ensures product meets: a) Developer needs b) User requirements c) Tester goals d) Manager plans

54 A defect due to wrong requirement interpretation is: a) Coding defect b) Requirement defect c) UI defect d) Hardware defect

55 Applying process standards ensures: a) Poor quality b) Consistent quality c) No testing d) Random output

56 A tester documents defects clearly. This helps: a) Developers fix quickly b) Increase errors c) Delay release d) Reduce quality

57 A defect repository is analyzed to: a) Increase cost b) Improve testing strategy c) Skip testing d) Reduce quality

58 A tester applies black-box testing. This focuses on: a) Internal code b) External behavior c) Hardware d) Deployment

59 Defects found in testing phase indicate: a) Perfect design b) Earlier phase issues c) No issues d) Hardware problems

60 Applying structured testing improves:

a) Random results b) Product reliability c) Coding errors  
d) Deployment delay
